HaOfek 3, Ness Ziona

Hi, I'm Dean, a software developer from Israel.

My passion for computers and software development started at home when I was 14, and grew stronger as I studied it in school. I began helping out my father with softwares and websites, and quickly became the lead developer in .

I have created different CRM and ERP solutions, and some complex databases, as well as quite a few websites.

I am logical and analytical, and a quick and enthusiastic study, math is my strong suit and algorithms speak to me, I love it!
